O que é AzureDevOps?

CI/CD para qualquer plataforma

Compile, teste e implante em qualquer linguagem, em qualquer nuvem ou localmente. Execute em paralelo no Linux, macOS e Windows e implante contêineres em hosts individuais ou Kubernetes.

The screenshot displays the Azure DevOps web interface. The top navigation bar shows the path: Contoso / AdventureWorks Mobile / Pipelines / Builds / 10382. The left sidebar contains a menu with options: AdventureWorks, Overview, Pipelines (selected), Builds, Releases, Library, and Deployment groups. The main content area is titled 'Enabling feature flags for Preview Attachment and Grid Views' and shows the build details for 'AdventureWorks/PackageFramework' on the 'master' branch, build #889. The build is currently in the 'Running' state. A table lists the jobs: 'Windows Job' (Running, 1m 53s), 'Linux Job' (Running, 3m 29s), and 'macOS Job' (Running, 3m 07s). The 'Linux Job' is expanded, showing a list of steps: 'Prepare job', 'Initialize job', 'Get sources', 'Cmdline', 'Nodetool', and 'Install dependencies'. The 'Install dependencies' step is currently running, and its output is visible in a terminal window, showing commands like 'yarn install v1.7.0', 'node build/npm/preinstall.js', and 'npm run compile'.

Mine Active Completed Abandoned

Created by me

Initialize client with .client.init
Celeste Burton requested #238 into master

Use latest React version
Celeste Burton requested #230 into features/react-update

Assigned to me

Check returned identity for null status
Colin Ballinger requested #212 into master

[WIP] Add tests for reticulating splines
Robin Counts requested #221 into master

Assigned to my team

Add exception mappings for disconnect
Colin Ballinger requested #249 into master

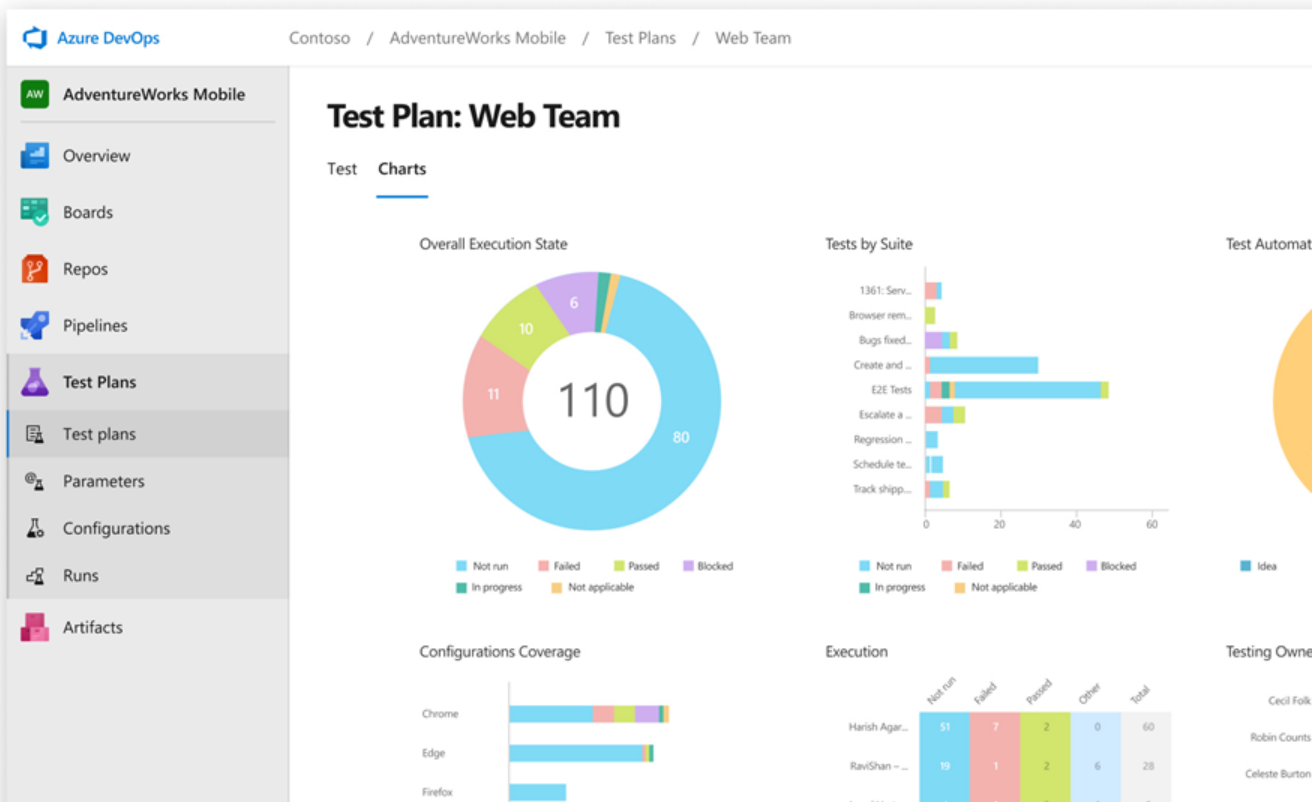

Maintain folder structure when converting isomorphs
Robin Counts requested #234 into master

O que é AzureDevOps?

Azure Test Plans

Teste manual e exploratório

Teste com frequência e libere com confiança. Aprimore a qualidade geral do seu código com ferramentas de teste exploratório e manual para seus aplicativos.

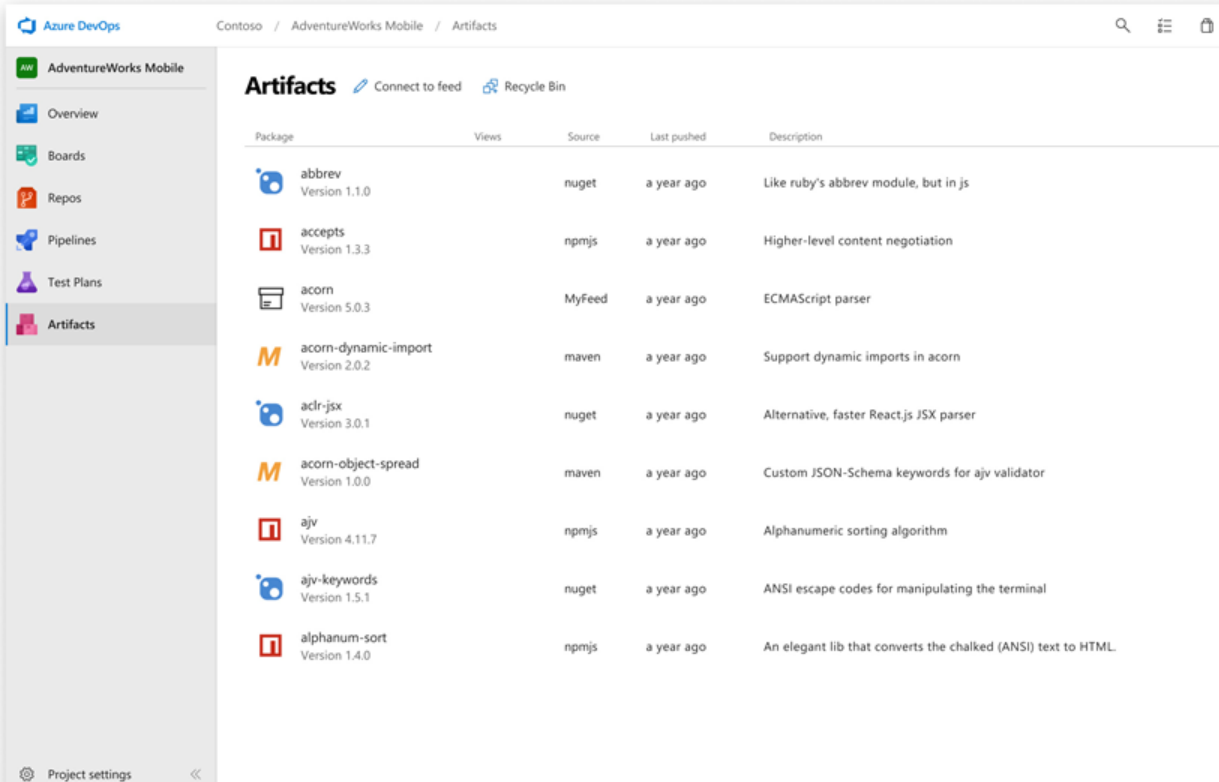

O que é AzureDevOps?

Azure Artifacts

Repositório de pacotes universal

Compartilhe pacotes NuGet, Maven e npm de fontes públicas e privadas com toda a sua equipe. Integre o compartilhamento de pacotes a seus pipelines de CI/CD de forma simples e escalonável.
